대표출원인명 : SUMITOMO CHEMICAL COMPANY, LIMITED (A00428)

(57) 요약 (Abstract) :
 PROBLEM TO BE SOLVED: To obtain a resin composition by using a specific compound capable of standing a high temperature when a plastic is processed, not damaging basic performances of a plastic, showing high antibacterial actions having high light-resisting performances.

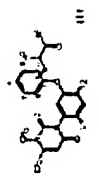

SOLUTION: This composition is obtained by mixing a resin with a pyridyl pyrimidine compound of the formula (R is H, a lower alkyl or a lower alkoxy). Especially, 4,6-dimethyl-2-(6-phenylpyridin-2-yl)pyrimidine is preferable as the compound of the formula. A polyvinyl chloride-based resin, a polyolefin resin or an acrylonitrile-butadiene-ethylene-copolymer resin is preferable as the resin. The amount of the compound of the formula to the resin is preferably ≥ 0.001 wt.% and ≤ 10 wt.%, especially ≥ 0.05 wt.% and ≤ 1 wt.% based on the total of the composition. The antimicrobial resin composition is capable of preventing stains caused by molds, etc., of an electric household appliances, an office automation apparatus, an agricultural film, a tent, etc.
